INSTRUCTIONS:

1. Wet a paper towel and wipe the excess black fuzz from the vinyl areas on the butterfly. You can use glass cleaner on the vinyl areas to remove any oils. This will make the coloring easier.
2. Color the butterfly, both the chipboard areas and the vinyl areas. The vinyl areas will be pale in comparison and may have a bubbly appearance. This can be improved by using a second coat after the first coat has dried for a few minutes. The vinyl areas are transparent, so the light will show through them.
3. Allow time for your butterfly to dry before handling.

TIP: Bend the butterfly at the inner edge of each wing, to make it look more 3 dimensional.
